DM

Claim 1 (Original)

1. An image display apparatus comprising:

an image-data storage section for storing a data of a radiograph and other image data;

an image-data display section for displaying specified image data which is read from the image data storage section;

wherein an image reading window is formed on a screen of the image displaying section for displaying an image of a target region to be diagnosed or to be trace-read, and an image-reading-window setting means is provided for not displaying an image other than the target region to be diagnosed or to be trace-read.

Claim 2 (Original)

2. An image display apparatus according to claim 1, further comprising an image-reading-window shifting means for shifting a setting position of the image reading window formed on the display screen.

3. (Amended) An image display apparatus according to claim 1, further comprising an image-reading-window-size changing means for changing a size of the image reading window formed on the display screen.

4. (Amended) An image display apparatus according to claim 1, further comprising an image-reading-window-shape changing means for changing a shape of the image reading window formed on the display screen.

5. (Amended) An image display apparatus according to claim 1, wherein the shape of the image reading window is rectangular or square.

6. (Amended) An image display apparatus according to claim 1, further comprising an image processing means for processing the image in relation to the image data displayed on the image reading window.

Claim 7 (Original)

7. An image display apparatus comprising:

a data storage section for storing a data of an image;

an image display section for displaying a specified image, the specified image being based on a specified data of the image, that is sent from the data storage section;

an image reading window for displaying a target region to be checked in the specified image; and

an image-reading-window setting means for not displaying an image other than the target region to be checked.

Claim 8 (Original)

8. An image display apparatus according to claim 7, further comprising an image-reading-window shifting means for shifting the image reading window.

Claim 9 (Original)

Art Unit: 1600

9. An image display apparatus according to claim 7, further comprising an image-reading-window-size changing means for changing the size of the image reading window.

Claim 10 (Original)

10. An image display apparatus according to claim 7, further comprising an image-reading-window-shape changing means for changing a shape of the image reading window.

Claim 11 (Original)

11. An image display apparatus according to claim 7, further comprising an image-data processing means for changing image quality of the image.

12. (New) An image display apparatus according to claim 2, further comprising an image-reading-window-size changing means for changing a size of the image reading window formed on the display screen.

13. (New) An image display apparatus according to claim 2, further comprising an image-reading-window-shape changing means for changing a shape of the image reading window formed on the display screen.

14. (New) An image display apparatus according to claim 3, further comprising an image-reading-window-shape changing means for changing a shape of the image reading window formed on the display screen.

15. (New) An image display apparatus according to claim 2, wherein the shape of the image reading window is rectangular or square.

16. (New) An image display apparatus according to claim 3, wherein the shape of the image reading window is rectangular or square.

17. (New) An image display apparatus according to claim 4, wherein the shape of the image reading window is rectangular or square.

18. (New) An image display apparatus according to claim 2, further comprising an image processing means for processing the image in relation to the image data displayed on the image reading window.

19. (New) An image display apparatus according to claim 3, further comprising an image processing means for processing the image in relation to the image data displayed on the image reading window.

20. (New) An image display apparatus according to claim 4, further comprising an image processing means for processing the image in relation to the image data displayed on the image reading window.

21. (New) An image display apparatus according to claim 5, further comprising an image processing means for processing the image in relation to the image data displayed on the image reading window.
